

Many shotgun shooters are using foreign primers in reloads these days because most of the time they cost considerably less than the more familiar CCI, Federal, Remington and Winchester brands. There have been several comments made about size differences and if you use some of the foreign brands you will have loose primers in your hulls if you switch back to the domestic brands. Here is a chart published in Trapshooting USA.

A) INDICATES THE DIAMETER OF THE PRIMER AT THE TOP

B) INDICATES THE TOTAL LENGTH OF THE PRIMER

C) INDICATES THE DIAMETER OF THE PRIMER AS CLOSE TO THE BASE AS I COULD MANAGE

D) INDICATES THE DIAMETER OF THE PRIMER FLANGE

E) IS THE THICKNESS OF THE PRIMER FLANGE
